Quantum logic - a new way to solve old problems

By: Maureen St Germain

What is logic? It is a system of predicting the future! Logic, we say is a system of principles that produce an ordered thought process usually based on cause and effect. We say that things proceed from known factors to predictable results which minimize risk and improve results.

Quantum logic is a term I've coined to explain the concept that certainly many possibilities exist - that will address a specific issue. A new way to look at problems is to say they are an opportunity to experience life.

The quantum physicist tells us, the observer is part of the equation. Consider this, in the quantum world everything is expressed as percentages. You've heard it from the weatherman describing the weather, "50% chance of rain."

There is a "new way" of solving problems that has nothing to do with the way we have solved things in the past. This new way defies old logic - ergo - Quantum logic.

Look around you, see if you don't agree? There is no more "forcing" something to happen the way you want it to. No more desiring change and then following expected procedures to achieve it. All the business books tell us of paradigm shifting from bosses being managers i.e. dictating solutions to leaders.

Leaders inspire creative thinking, openness to untried solutions and shared responsibility. Managers dictate this is how we do it. Being open to possible surprise solutions will actually help you discover creative solutions that you had not considered before. This is the new thinking in management circles everywhere and it bodes well for individuals too.

The old logic is giving way to a new "quantum logic." Quantum logic invites you to recognize that there are multiple pleasing solutions to every situation. It is up to you to discover. How do you get there when you are upset here? You let the solution reveal itself to you!

How do you let the solution show itself to you?
You leap frog over your presumed disaster - and see that it all worked out - and that it is completely behind you.

Using this tool to process your feelings by leap frogging softens the expression of those feelings. It creates a feeling a joy, and happiness not only because of the desired result, but that the problem that apparently would have affected your desired outcome didn't materialize!

I have a beautiful border print in my bathroom that is scalloped, meaning it has uneven edges at the bottom. The contractor who put it in - didn't secure it very well, and then didn't seal it with silicone above the tile like some do when paper is hung in a bathroom. Within a short time - the paper had started to fall down.

The contractor had to re-do the job and told me to purchase new border print -because as he said, once it starts to come off, there is no fixing it. The second time it lasted several years, but again, was starting to curl up. I knew I would have to take it all down and replace it. Just like the first time.

I kept putting off the job, thinking that it was a really big job, and that I needed help to complete it. Then one day while in the hardware store, I decided to ask about what kind of silicone sealant to purchase, so that I would have the necessary items to finish the job.

The clerk misunderstood my question and took me to the glue section that is created for wallpaper that has started to peel back. Here was a solution I hadn't considered that the clerk was showing me.

It took a certain persistence, but the special glue worked! I've observed that other situations around me are just like that. Have you found yourself in situations that appear to be overwhelming where outside help is required and yet were solved in unexpected ways far easier than originally anticipated?

I invite you to "leap frog" over the next disaster. Don't worry about how, just seeing that the situation resolved easily, in plenty of time, or money, and that you were pleasantly surprised.

Develop the habit, that when you feel your emotion start to build about something that you had counted on, and now appears to be stalled, remind yourself that you can leap frog over the problem, see yourself satisfied with the solution, and the energy of multiple possibilities (Quantum logic) has just increased the odds that you will have a pleasing outcome.

Crazy? Yes, from our past paradigms, but the subatomic world of quantum tells us that the observer is part of the equation. It tells us that when scientists attempt to measure anything in the subatomic world of quantum, their intention of the outcome affects the outcome - 100% of the time! Right now, quantum technology accounts for 40% of the gross national product and is the most accurate predictive system of science in the history of science!

Begin by inviting all the possibilities that would make you feel satisfied to present them to you. The most likely solutions will come to the front first. It will open you to ideas and solutions you didn't even know exist!

Use this metaphor to help you to sort through thoughts of discouragement and disaster. Leap frog over negative thoughts and then discover what it feels like to have satisfactory results.
